IMPORTANT

INSTALLATION DETAILS

It is essential that your Haddonstone seat or table is sited on a firm and level area. Although the top is reinforced, it may crack if subjected to a pivoting or twisting strain.

An 8 to 1 sand/cement bedding mortar must be used to ensure that each support bears an equal weight, whether between stone components or between stone and floor. The properties of this mixture give a secure hold that can be broken without difficulty if the seat has to be re-sited. We cannot accept responsibility for breakage if this instruction is ignored.
